

Azure OpenAI GPT Model Integration with PowerApps

This document outlines the approach for integrating the Azure OpenAI GPT model into PowerApps, utilizing Azure AI Foundry for customization and Power Automate.

1. Azure OpenAI GPT Model

- Azure OpenAI provides advanced language models that can be customized for specific tasks.
- The GPT model will be tailored using Azure AI Foundry for our use case.

2. Customization in Azure AI Foundry

- Azure AI Foundry allows fine-tuning of models for domain-specific requirements.
- The customization process ensures the model meets business needs effectively.

3. Integration with PowerApps

- PowerApps serves as the interface for end-users to interact with the AI model.
- Using Power Automate, the AI model can be seamlessly connected to workflows.

4. Benefits of the Approach

- Leverages Azure's powerful AI capabilities for accurate and efficient outputs.
- Simplifies user interaction with AI through PowerApps.
- Automates workflows and enhances productivity using Power Automate.

This document is a high-level overview and can be expanded with implementation details.
